Aims and Scope

The Journal will publish original contributions on all aspects of gross morphology, paleomorphology, macro- and microanatomy, ultrastructure (including functional roles of subcellular particles), molecular (especially those using recent techniques in cellular and molecular biology that will enhance our understanding of insect morphology and development), functional and experimental morphology, and development (embryonic and post-embryonic, including papers on molecular and experimental development of insects); similar studies of other related arthropods, which have direct bearing on our understanding of insect morphology and development, are acceptable. In addition, reviews developing new concepts, hypotheses and theories, and a limited number of notes and book reviews will be published.

All papers submitted to the Journal must clearly relate to the above-mentioned aspects of morphology and embryology.
